

Get omnichannel inventory and supply chain visibility

Navisphere Vision gives you real-time visibility to all your inventory at rest and in motion for both retail and online sales. Our machine learning algorithms leverage 115 years of logistics experience, Azure services, and Intel IoT sensors to help you notify customers of delays, react to disruptions, and optimize on-hand inventory across your network.

Gain insights

Get line-of-sight into where every shipment is, why they are moving or not, and when they will arrive across your global network

React quickly

Identify delays, risks, and disruptions before they happen so you can keep inventory moving and customers happy

Lower costs

Improve delivery performance and reduce your total on-hand inventory across your global network reducing net costs and improving margins

Corey Graven, VP NA Supply Chain, Clarios

With our global footprint and scale, supply chain visibility and connectivity are critical to ensure we can optimize our logistics operations and inventory, and ultimately deliver a positive customer experience. Navisphere Vision has been a vital tool for our customers to have advance visibility of incoming freight, to plan ahead and make their own supply chain decisions.
